CONCRETE GRINDING & POLISHING

W.A.M Floors is Sale's premier supplier of polished concrete flooring.

This versatile option can be used both inside and out and is functional and long lasting.

POLISHED CONCRETE

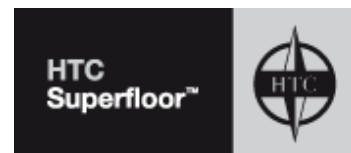

Polished concrete is a process where a machine is passed over the floor multiple times with the use of different grades of diamond points. The floor is hardened and the air holes are filled to enable the floor to obtain a shiny smooth surface.

No two floors will ever look the same for a variety of reasons. Where there are high and low points in your floor, the high points will feature greater amounts of stone where the lower points will feature less amounts of stone, or in some cases none at all.

While we aim to get the best possible result, when planning to pour a new slab to be polished, we recommend that you consult with your builder, concreter and concrete supplier to ensure that you have the right concrete mix and application for the look you would like to achieve. We cannot guarantee a perfect finish due to the nature of concrete and the input of different trades during the process.
